- ✓ Works with Nx Witness 4.2 and 5.0 versions.

Nx Witness

Nx Server System With Imagus Architecture

* Visit Vix Vizion website www.vixvizion.com for further information.

Benefits To Customer

Imagus is a proven video analytics and facial recognition product installed at hundreds of sites across Australia and New Zealand. It is fast, accurate and uses small memory resources. Other benefits include:

- Imagus is fast to detect and provides real time alerts for quick response by customer.
- Allow push notifications on mobile phones through Nx Witness mobile app.
- An easy-to-use and seamless integration allowing the customers to handle detections, video playbacks, Notifications, and enrolments from the Nx Witness application.

How Is Privacy Addressed

Imagus has been designed to operate with Privacy Principles Guidelines in mind. When a face is detected on a camera using our Imagus software, we create a metadata face file ("Metadata") for that particular face which describes the characteristics of the face. This Metadata is then used by the system to match against faces of people of interest who have been enrolled by the operator in the enrolled faces database. The Metadata is a data file, not an image file.

Face Metadata storage is a configurable part of our software which is managed by the customer and set depending on their needs, Metadata can be stored for days or minutes or immediately deleted.
