- Powerful forensic analysis tools for incident investigation, contact tracing, known/unknown associate identification
- Customer / staff identity checking and biometric access control
- Flexible reporting

BUSINESS AND CUSTOMER INSIGHTS

- Imagus collects and manages valuable business data from your video streams
 - Occupancy
 - People Counts
 - Dwell Time
 - People Movements
- Report and analyse customer activity over time to optimise your site layout, people flow, customer/staff well being, and marketing activities

VIX VIZION AND PRIVACY

Imagus software has been designed with privacy top of mind. Imagus can be installed locally. Data can be stored encrypted locally on your own servers. Face images can be stored as metadata so that the actual image files can be deleted.

Metadata can be used for future reporting, forensic analysis or matching.

Analytics data can be de-identified and stored as consolidated analytics.
