

Imagus' Facial Recognition Solution is fully integrated into Inner Range Integrity Access Control System.

Strengthen access security using 2FA with facial recognition to verify your identity.

Face identification for safe contactless access control. A simple and effective method to verify the identity of a person.

Imagus Integriti Integration

IMPLEMENTATION - EASY AS 1, 2, 3

Imagus Software provides tools to handle everything from the start to finish, keeping the process simple and easy to ensure a seamless installation with no disruptions to your business.

1

SOFTWARE INSTALLATION

Install software using the installers provided by Vix Vizion.

2

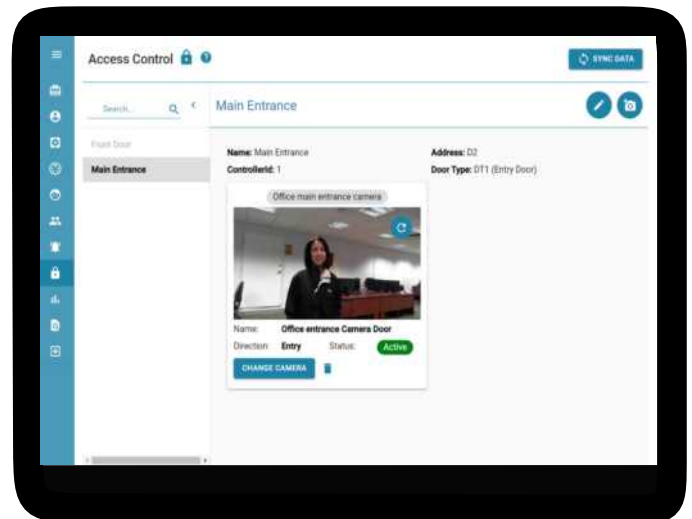

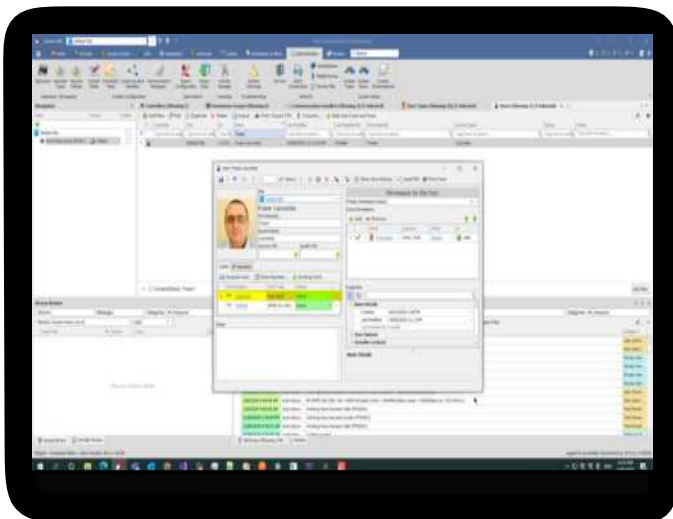

SETUP SYSTEM HANDSHAKE

Establish the communication between the systems through the REST/XML Web Service using Integriti System Designer and Imagus Configuration Tool.

3

ASSOCIATE CAMERA TO DOORS

Door camera association is easily configured through the "Access Control" function using the Imagus Web Settings application.

CREDENTIAL MANAGEMENT

Integriti manages all credentials from a single interface, including the reporting of security alarms and audits of changes to credentials. A Face Card is generated automatically for each user after the initial sync process from Integriti to Imagus. Setup is quick and straightforward, requiring little effort on your part and avoiding any disruption in your day-to-day business operations.
